Bruce Shackleford submits annual report on Fayetteville wetland-mitigation site

Please click on image to ENLARGE view of Bruce Shackleford talking with Alderman Lioneld Jordan, the new mayor of Fayetteville, Arkansas, back on August 21, 2008, at the organizational meeting of the Fayetteville Natural History Association's green-infrastructure committee. Shackleford has been the environmental consultant for Fayetteville's new sewage-treatment facility and related projects for several years. His interest in prairie and wetland in Northwest Arkansas has made him a leader in the FNHA project and one of his hopes is to see even more city-owned land at the treatment facility become a part of the nature preserve. A savanna adjacent to the wetland site would be an excellent addition to the city's green infrastructure if put into a perpetual easement.

Please click on image to ENLARGE view of sign at Fayetteville's Westside Wastewater Treatment Plant. Woolsey Wet Prairie was developed as mitigation for destruction of natural wetland on the site of the treatment plant.
